

(0:00 - 0:07) Hi, my name is Kevin Stevens, I'm Vice President
(0:07 - 0:09) of Pollution Systems located in Houston, Texas
(0:09 - 0:12) Pollution Systems designs, builds, and services
(0:12 - 0:14) industrial air pollution control equipment.
(0:14 - 0:18) We mainly focus on thermal and catalytic oxidizers
(0:18 - 0:19) as well as wet scrubber technology.
(0:20 - 0:22) Each of our thermal oxidizers are custom designed
(0:22 - 0:24) for our customers' operating process
(0:24 - 0:26) and performance requirements.
(0:26 - 0:29) We also offer trailer-mounted thermal oxidizers
(0:29 - 0:31) for rental or long-term lease.
(0:31 - 0:33) Our company is different than the majority
(0:33 - 0:36) of the companies out there in that our salespeople
(0:36 - 0:38) have a good technical background and application
(0:38 - 0:40) knowledge with the products that they sell.
(0:40 - 0:42) They work with each of our customers
(0:42 - 0:44) to make sure that they understand the different
(0:44 - 0:46) technologies available and the trade-offs
(0:46 - 0:48) between the different technologies
(0:48 - 0:50) so that we can get the right product and solution
(0:51 - 0:55) for their particular situation.
(0:55 - 0:56) All of our services are turnkey proposals
(0:56 - 0:58) which are designed to correct the problem the first
(0:58 - 1:00) time and minimize production downtime.
(1:00 - 1:03) If you're an industrial company that's looking to solve
(1:03 - 1:06) an air pollution control problem, our technical
(1:06 - 1:08) salespeople will be more than happy to work with you
(1:08 - 1:11) to help you understand your options and develop a
(1:11 - 1:13) long-term solution for your problem.
